GREEN VALLEY EDUCATIONAL INSTITUTE (GVEI)

DEPARTMENT OF INFORMATION & COMMUNICATION TECHNOLOGY (ICT)

STUDENT WORK, PORTFOLIOS & PROJECT EVIDENCE (2026–2027)

Prepared by: Mr. Mehraj U Din Mir, HOD ICT **Designation:** Head of Department – ICT

Academic Session: 2026–2027 | Status: Verified Evidence Standard

1. Purpose of the Document

This document establishes the institutional framework for archiving, cataloging, and presenting authentic evidence of student learning, practical application, creativity, computational thinking, and digital skill development across all academic levels managed by the ICT Department.

It systematically demonstrates how learners translate theoretical classroom instruction into applied laboratory exercises, functional digital artifacts, coding programs, and collaborative project solutions.

> **PORTFOLIO CORE MANDATE**
> *"The student portfolio must reflect genuine student work, providing verifiable evidence of learning progression, tangible creative achievements, diagnostic learning gaps, and the systematic support provided by educators."*

2. Student Work and Evidence Categories

The ICT Department organizes student artifacts and developmental records across eight structured evidentiary categories:

2.1 Notebooks and Practical Work

- **Notebook Samples:** Selected representative samples of students' physical ICT notebooks, syntax notes, and theory assignments.
- **Laboratory Exercises:** Structured practical task sheets and programming exercises completed during hands-on lab sessions.
- **Worksheets & Task Drills:** Diagnostic worksheets, algorithmic flowchart tracing drills, and task-based exercises.
- **Conceptual Independence:** Documented evidence of learners' ability to interpret specifications and execute operations without continuous intervention.

Evidence to Maintain: Dated student work samples, authenticated practical lab sheets, educator remarks, and evaluation records.

2.2 Coding and Computational-Thinking Activities

- **Progressive Coding Environments:** Block-based programming (Scratch) in junior levels transitioning to text-based environments (Python/SQL) in senior grades.
- **Algorithmic Reasoning:** Activities developing procedural sequencing, conditional logic, pattern recognition, problem decomposition, and systematic debugging.

- **Challenge Modules:** Competitive coding challenges, timed debugging problems, and algorithmic problem-solving tasks.
- **Scaffolding Progression:** Verifiable progression showing students moving from heavily scaffolded exercises to autonomous solution authoring.

Evidence to Maintain: Student source code files, execution console screenshots, algorithmic briefs, completed activity logs, and teacher observation rubrics.

2.3 Student Digital Products and Creative Work

- **Multimedia Presentations:** Student-designed digital presentations, interactive slide decks, and screencasts.
- **Digital Graphics & Art:** Vector artwork, digital illustrations, campaign posters, publication layouts, and UI mockups.
- **Productivity Documents:** Professional multi-page reports, formatted data sheets, normalized tables, and automated spreadsheets.
- **Emerging Tech & AI Literacy:** Age-appropriate AI exploration artifacts, ethical technology analyses, and digital citizenship projects.

Evidence to Maintain: Original native files, high-resolution exported screenshots, project design briefs, cross-level samples, and formal rubric assessments.

2.4 Projects, Prototypes and Innovation Work

- **Individual & Team Endeavors:** Standalone coding projects, full-stack prototypes, and collaborative group creations.
- **Applied Digital Solutions:** Interactive educational games, database-backed record systems, automation scripts, and static web pages.
- **Innovation Models:** Physical computing models, robotics prototypes, and AI club capstone deliverables.
- **Community & Real-World Relevance:** Projects addressing sustainability, school productivity, environmental monitoring, or local community needs.

Evidence to Maintain: Project briefs, student contributor rosters, objective statements, iterative development commits/milestones, final working build, photos/screenshots, and student contribution statements.

2.5 Project Evaluation and Teacher Feedback

Student project deliverables are evaluated against unambiguous, objective competency criteria rather than subjective aesthetic impressions.

Evaluation Criterion	Assessment Focus & Student Capability Evaluated
Conceptual Understanding	Accuracy and technical depth of underlying computing principles applied.
Application of Skills	Proficient, appropriate use of ICT tools, syntax, and development environments.
Problem-Solving & Logic	Capability to deconstruct constraints, structure algorithms, and debug defects.
Creativity & Originality	Evidence of novel student ideation, custom styling, and independent logic design.
Functionality & Accuracy	Operational reliability: whether the program, formula, or system functions without runtime failure.
Communication & Defense	Student capability to articulate project purpose, logic flow, and architectural choices.
Collaboration & Teamwork	Demonstrated contribution to team deliverables, task division, and shared repositories.

Evidence to Maintain: Completed evaluation rubrics, actionable teacher comments, graded project deliverables, and student self-reflection sheets.

2.6 Representative Cross-Level Work Sampling

The evidence archive must encompass a balanced cross-section of student work representing all classes handled by the department. Archival selection must validate:

- **Scope of Practical Competencies:** Demonstrating the full breadth of software, digital creation, and coding skills taught.
- **Cognitive Progression:** Exhibiting appropriate maturation in challenge and complexity from primary blocks to senior code.
- **Balanced Ability Sampling:** Showcasing both exemplary proficient artifacts and developing work to reflect authentic learning curves.
- **Collaborative vs. Solo:** Balancing independent student creations with team-based development projects.

> **OBJECTIVITY AUDIT RULE**
> *Selection Integrity Principle: Artifacts must be selected objectively and authentically. The portfolio must never consist exclusively of top-performing students' work; it must truthfully illustrate departmental teaching impact across all learner bands.*

2.7 Student Achievement and Learning Progression

The department systematically tracks longitudinal skill acquisition, preserving comparative artifacts that prove student growth over time:

- **Before-and-After Evidence:** Paired baseline and advanced work samples illustrating measurable technical improvement.
- **Independence Trajectory:** Transitions from step-by-step guided tutorials to unassisted, original software development.
- **Efficiency & Clean Code:** Progression toward cleaner syntax, efficient algorithms, and sophisticated graphic layouts.
- **External Recognitions:** Verified certificates, competition wins, hackathon placements, and official school awards.

Evidence to Maintain: Dated comparative artifacts, longitudinal project logs, rubric advancement sheets, and verified achievement awards.

2.8 Learning Gaps and Support Documentation

Documenting remedial support is as crucial as celebrating mastery. The department maintains rigorous records of identified deficits and subsequent pedagogical interventions:

Remedial Dimension	Mandatory Evidence Details Required
Diagnostic Learning Gap	Specific computational concept, syntax structure, or practical skill causing difficulty.
Evidentiary Source	Assessment script, laboratory observation, incomplete exercise, or compiler bug log.
Targeted Support Provided	Direct reteaching, step-by-step live demo, scaffolded drill, or peer mentoring.
Follow-up Audit	Reassessment problem, revised file resubmission, or subsequent observation checklist.
Remedial Outcome	Demonstrated mastery / partial progress / ongoing diagnostic support required.

Remediation Ethos: Documentation focuses strictly on constructive support rather than deficit labeling. Student privacy and confidential handling of all records are upheld.

3. Recommended Portfolio Organisation

The department maintains a master institutional evidence dossier supported by indexed physical files and centralized digital directory trees. The 9-part archival structure comprises:

- **Section A** Notebooks and Written Theory Work (Representative physical/digital notebook samples)
- **Section B** Practical Lab Tasks and Worksheets (Prescribed laboratory challenge sheets and logs)
- **Section C** Coding and Computational Thinking (Source files, Scratch blocks, Python trace logs)
- **Section D** Digital Products and Creative Work (Publications, spreadsheets, graphic designs, AI projects)
- **Section E** Projects, Prototypes and Innovation (Capstone software builds, robotics, innovation club artifacts)
- **Section F** Evaluation Rubrics and Teacher Feedback (Graded criteria sheets and constructive student feedback)
- **Section G** Class-wise Representative Samples (Standardized cross-sectional performance dossiers)
- **Section H** Achievement and Progression Evidence (Longitudinal before-and-after files, competition awards)
- **Section I** Learning Gaps and Support Records (Diagnostic registers, zero-period logs, and re-evaluations)

Archival Directives: Central digital repositories mirror physical files with standardized nomenclature (`[Session]_[Class]_[Activity]_[StudentID]`). Every archived artifact must be traceable to a specific class, academic date, and curriculum unit.

4. Student Work Evidence Register

The department logs all verified student work in the live tracking register below. Entries are recorded only for completed, authenticated work:

S. No.	Class / Level	Activity / Project Title	Evidence Type	Date	Mapped Learning Outcome	Evaluation / Feedback	File Reference
1	**Class XI**	Student Record Management System	Python/SQL Source & Docs	2026-08-14	Relational database operations & CRUD logic	Rubric Graded: 92/100 (Exemplary)	**ICT-XI-PRJ-01**
2	**Class IX**	Cyber Safety & Digital Footprint Poster	Digital Design (PNG/PDF)	2026-07-22	Digital ethics & visual communication	Constructive Feedback Provided	**ICT-IX-DES-04**
3	**Class VII**	Interactive Maze Game	Scratch Project (.sb3)	2026-09-05	Event broadcast & collision loops	Peer Reviewed & Scored 18/20	**ICT-VII-SCR-12**
4	**Class XII**	Board Practical Lab File Submissions	Physical Lab Record Books	2026-09-28	Comprehensive CBSE practical syllabus	Teacher Certified & Signed	**ICT-XII-LAB-01**
5	**Class VIII**	Financial Budget Modeling Sheet	Spreadsheet (.xlsx)	2026-06-18	Formulas, IF conditionals & chart design	Task Sheet Checked & Graded	**ICT-VIII-SS-03**
6	**Class VI**	Introduction to Algorithmic Logic	Physical Activity Worksheet	2026-05-12	Decomposition & step-wise sequencing	Evaluated with Remedial Notes	**ICT-VI-WS-02**

Logging Policy: Add entries only for student deliverables that have been physically or digitally authenticated, scored, and archived in departmental records.

5. Quality Standards for the Portfolio

The ICT Department adheres to nine rigorous quality assurance standards governing evidence preservation:

- **Authenticity & Traceability:** Every piece of evidence is authentic, dated, and attributable to a specific cohort and student.

- **Balanced Ability Representation:** Samples encompass developing, proficient, and advanced performers to provide a realistic overview.
- **Direct Curricular Alignment:** All student work is directly mapped to approved learning objectives and competency indicators.
- **Verifiable Assessment Records:** Authentic teacher feedback, signed rubrics, and diagnostic remarks accompany each sample.
- **Student Authorship Integrity:** Projects and coding scripts reflect the learners' genuine, independent efforts.
- **Data Protection & Backups:** Digital artifacts are maintained on secure school storage with redundant backup schedules.
- **Privacy & Child Safety:** Student identities, photos, and project data are shared strictly through authorized institutional channels.
- **Status Transparency:** Planned future projects are explicitly cataloged as planned, never conflated with completed student work.
- **Intervention Accountability:** Documented learning deficits are systematically paired with records of support provided and re-evaluations.

6. Priority Evidence for the Academic Audit

For institutional inspection and quality assurance reviews, the department maintains three benchmark case studies readily accessible:

Priority Case 1: Completed Practical / Coding Activity

- Include the formal student task prompt and procedural instructions.
- Include original student source code files and console execution output screenshots.
- Provide completed teacher evaluation rubrics with constructive written feedback.
- Map deliverables explicitly to the intended curriculum learning outcome.

Priority Case 2: Capstone Student Project / Digital Product

- Include comprehensive project specification brief and milestone timeline.
- Present the final functional deliverable (working application, database schema, or published document).
- Provide standardized competency assessment rubric with performance scores.
- Include documented evidence of the student's verbal defense and explanation of their work.

Priority Case 3: Documented Learning Progression & Remediation Dossier

- Provide an initial, unassisted baseline sample revealing a distinct learning difficulty.
- Document the diagnostic learning gap analysis and educator support interventions deployed.
- Include the subsequent, successful follow-up assessment sample demonstrating mastery.
- Present the final sign-off confirming resolution of the learning deficit.

> **EVIDENCE VERACITY DIRECTIVE**
> *Audit Standard: Case studies are selected directly from active classroom archives to demonstrate authentic cognitive progression, problem-solving independence, and pedagogical efficacy—rather than superficial aesthetic polish.*

7. Expected Outcome and Institutional Impact

A systematic, rigorously curated student work portfolio enables the Academic Leadership and Quality Audit teams to evaluate the dynamic connection between curriculum design, classroom instruction, laboratory practicals, student innovation, and verified competency outcomes.

Furthermore, it provides the ICT Department with an objective empirical foundation to celebrate student technological achievements, refine pedagogical practices, and deliver targeted remediation to ensure every learner achieves digital and computational fluency.
